SOURCE

No aviation gasoline is being produced in the Luetzkendorf (N 52/D 80) Plant, and it probably will not be produced in the near future as there are no stockpiles of tetraethyl lead available. The synthetic installation of the Luetzkendorf Mineral Oil Plant is to be shut down on 31 March 1951 to save the monthly subsidy of about one million eastmarks. However, the expansion of the power station is planned, and a low-temperature carbonization plant is under construction. After the shutdown of the synthetic installation, the usable contacts (kieselgur with cobalt) and the contact furnaces will allegedly be transferred to the Schwarzheide (N 52/A 23) SAG.
